ABSTRACT

Leupold & Stevens, Inc. and Portland Community College (Oregon) cooperated in offering special math instruction as part of a workplace literacy project. A needs assessment indicated a problem in basic math skills such as simple calculations on a calculator and decimals, which were used on blueprints. Operators, set-up workers, and lead workers in parts manufacturing were the target group. Although the company was very committed to the program, it was not willing to commit company time; all instruction was fully voluntary after work hours. During the first class offering, the need for two changes became apparent: class reimbursement and narrowed content. The curriculum was self-paced and somewhat self-instructional with students working only in areas of interest. Most students took at least seven modules. (The 10-page report is followed by appendixes, including completed applications for the blueprint math class, completed learner and supervisor evaluations, and sample math skills materials. These materials include objectives, pretest, posttest, and worksheets in the areas of blueprint, decimals, fractions, percentages, right triangles, measurement, and metric conversion. A final report contains questionnaires, attendance sheets, new instructional materials, student records, and learner and supervisor evaluations.) (YLB)

DESCRIPTION OF PROBLEM (NEED), PURPOSE OF INSTRUCTION, AND TARGET GROUP

Company:

Leupold & Stevens, Inc. designs and manufactures optical. ballistic, scientific and electronic products. Its management is built around teamwork and since its founding in 1907, the bottom line continues to be state-of-the-art quality. It is located in Beaverton, Oregon and employs approximately 500 people. My internship involves coordinating with the human resources department to provide instruction. (Portland Community College and Leupold are partners in a Workplace Literacy Grant awarded last year. It was imperative to conduct instruction as soon as possible in order to fulfill the needs of the Grant. The pilot testers were the students.)

Problem:

A preliminary needs assessment at Leupold & Stevens indicated a problem in basic math skills. In talking with over thirty people and observing some of them, I found that many employees do not understand decimals and are unable to solve simple calculations on a calculator. Other areas of concern involve decimal conversions, recording measurements and obtaining their averages and ranges, performing metric conversions and solving basic trigonometric functions. Decimals are used throughout the company on the blueprints and employees must be able to accurately measure parts and determine if each part is made within the decimal tolerances indicated on the blueprint.

Purpose:

Special instruction will be designed and delivered that focuses on using a calculator and Leupold & Stevens' blueprints to accomplish the following goal: using a calculator, the student will demonstrate basic math applications required to understand the Leupold & Stevens blueprint. These applications involve decimals, fractions, measurement, averages, metric conversions and basic trigonometric functions.

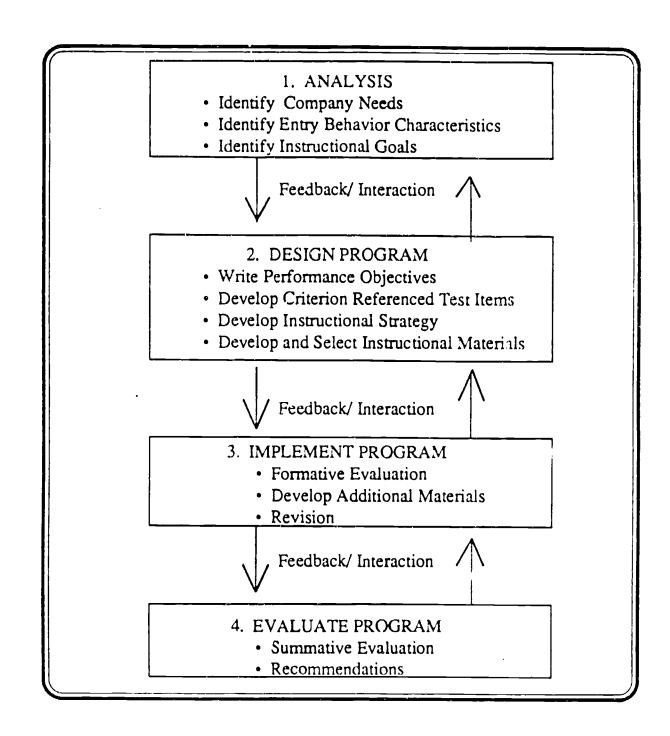

Target Group:

Operators, set-up, and lead people in parts manufacturing would be the most appropriate group to improve in basic skills, although throughout the company there were employees interested in improving their basic math skills. It is estimated that 75-80% are high school graduates.

Skill Builders MT Rev:5/10/91

SYSTEM MODEL FOR LEUPOLD & STEVENS, INC.

Skill Builders MT Rev. 5/24/91

GOALS & OBJECTIVES FOR LEUPOLD & STEVENS, INC.

Goal 1.0: Analysis

Objective 1.1: Identify company's basic math needs, the number of people who need the skills and the benefits a class could provide to the company and the workforce.

- 1.1.1: Focus groups with assembly & manufacturing supervisors
- 1.1.2: Interviews on the floor with supervisors
- 1.1.3: Interviews and observations of assembly and manufacturing workers.

Objective 1.2: Identify entry behavior characteristics.

- 1.2.1: Determine level of schooling potential students have completed
- 1.2.2: Interview people who have taken classes in the past
- 1.2.3: Observe potential students on the job

Objective 1.3: Identify instructional goals.

- 1.3.1: Observe workers in several departments
- 1.3.2: Interview / survey of target learners
- 1.3.3: Interview supervisors who did not attend focus groups
- 1.3.4: Gather forms and charts used on the job

Goal 2.0: Design Program

Objective 2.1: Write performance objectives.

- 2.1.1: Determine most critical math needs based on interviews and returned surveys
- 2.1.2: Limit to eight modules
- 2.1.3: Identify and consult with subject matter expert

Objective 2.2: Develop criterion referenced test items.

- 2.2.1: Consult with SME
- 2.2.2: Refine and narrow test items

Skill Builders MT 5/17/91

Goals & Objectives, cont.

OI: 1 1	3 3	D 1	. , ,	
Uniective	2 3.	I Jevelon	instructional	ctratemy
170 CC (1 1 C		DCVCIOD	mou actiona	i si: aice, y.

- 2.3.1: Develop self-paced, self instructional modules
- 2.3.2: Consult with SME, human resource people

Objective 2.4: Develop and select instructional materials.

- 2.4.1: Examine textbooks and materials from the company
- 2.4.2: Examine ABE/GED math workbooks and textbooks
- 2.4.3: Tailor make the materials to fit the objectives of each module

Goal 3.0: Implement the Program

Objective 3.1: Conduct formative evaluation.

- 3.1.1: Obtain feedback from pilot students
- 3.1.2: Obtain feedback from SME

Objective 3.2: Develop additional materials,

- 3.2.1: Based on formative evaluation, add and/ or delete instructional materials
- 3.2.2: Obtain additional ideas from students

Objective 3.3: Revise materials as needed,

- 3.3.1: Make corrections on materials
- 3.3.2: Eliminate some goals and/or materials

Goal 4.0: Evaluate Program

Objective 4.1: Conduct summative evaluation.

- 4.1.1: Obtain supervisor evaluations
- 4.1.2: Obtain student evaluations
- 4.1.3: Adjust and/or revise instructional materials

Objective 4.2: Make recommendations.

ISSUES AND CONSIDERATIONS

Since this project was a part of a workplace literacy grant, there were several issues I had to deal with immediately. First there were the time limitations of the grant, second, there was the time and money the company was willing to commit to the project. Other issues included the scheduling of class time and the broad area of math skills managers indicated that the workers needed.

Time Limitations:

Although the grant was awarded in January 1990, activity at Leupold & Stevens did not begin until the following December. Earlier in the year a preliminary audit had indicated an interest in upgrading basic math skills at the company. I first approached the company in December with the possibility of offering basic math skill classes. It was imperative that classes begin as soon as possible to meet the needs of the grant. I began instruction in February after little more than a month in needs assessment, task analysis, design and development. Ideally my group should have been the test group and they were aware that this was the first time this instruction had been offered. They were very helpful in offering advice and criticism concerning materials. The students the instruction had been targeted for were the minority in the group. Most of the students came from the offices where they indicated there is actually little math application!

Company Commitment:

Leupold & Stevens went above and beyond duty in offering manager time, worker time, tours, materials, and general cooperation. They have a super human resources group who were readily available for blueprints, contacts, materials and equipment. However, they were not willing to commit company time to the instruction. All instruction was fully voluntary after work hours. The best some of the managers would offer was that employees could leave half an hour early for class if they made up the time elsewhere. Some of the shifts are ten hour shifts. Attending class would add another two hours to an already long day.

Class Schedule:

Scheduling times for classes proved to be the most aggravating. Several shifts end over a three hour period in the early afternoon. Therefore it was nearly impossible to set up a class time that accommodated all schedules. Additionally, the usual classroom is up a flight of steps that are inaccessible for one of the students, so an effort was made to meet his needs, especially since he can rarely attend classes and was anxious to do so. In the end it was decided to hold classes in two rooms over a two and a half hour period in an open lab semi-self instructional manner. My SME was especially helpful in working with students in one room while I was in the other.

Broad Area:

Almost unanimously the managers and supervisors indicated that the workers needed to improve basic skills in the following areas: blueprint reading, tolerances, decimals, fractions, measurement, metric, basic algebra, calculator use, and trigonometric functions. I couldn't pin down any one or two really critical areas. So I tried to apply some aspects of most of those areas to my classes. Even this proved too much both for me and the students.

Skill Builders MT 5/24/91

RECOMMENDATIONS

As instruction progressed, several items needed to be changed if another class were to be offered. I felt it necessary that employees receive some type of reimbursement. The class offerings were too broad; particular math skills needed to be pin-pointed. The time span of the course was too long. Revision was an on-going area and will continue throughout the classes so it isn't going to be discussed here.

Class Reimbursement:

One of the major complaints with the instructors involved with the grant was the apathy of the students. While they enjoyed the instruction at the various companies, lack of attendance was across the board at the companies that offered no reimbursement to the employee. Leupold & Stevens has a pretty good record for offering company time for training as well as reimbursement for credit classes taken outside the company. I discussed both of these issues with Jim Gillis and Anthia Swanson in human relations and suggested that attendance would increase if the company would even pay for half class time or offer some payment at the completion of classes. I reasoned that even though mine weren't for credit, they were improving basic skills that the company felt all of its employees needed to obtain. Since my classes had been well received, I think Jim was willing to offer company time for half the class. A discussion with several of the supervisors indicated that the last half hour of work could be spent twice a week in a math class.

Narrowed Content:

The first set of classes were not only too broad but too long (which may have also contributed to lack of attendance). This time I offered to Jim a month long series of only three areas: decimals, fractions, percents. These seemed to be the most important to the previous group. (Although I did offer the trig functions twice with great success.) Most of the students in the second session are from the same work area and thus have similar needs which is a definite advantage to the teacher in designing more contextually job related instruction. I chose an hour long session since the company was willing to pay only half an hour but ideally I would have chosen at least an hour and a half. These classes are also more structured than the original with more class interaction and instructor explanation.

Skill Builders MT 5/24/91

ADDITIONAL OBSERVATIONS/ INSIGHTS

I have this smug feeling that if I had it all to do again I know just what I would change. But I have no assurance that my results would be any different or better. My audit would change and as a result everything else that followed would be different.

Audit:

Hours were spent observing all over the company and trying to gain an insight to all the jobs in manufacturing and assembly. In the future I am going to concentrate if possible on one specific area and observe in that area primarily. I will talk to the people, supervisors, and managers of that area only and develop classes for the people in that area alone. Instruction would be less generic and more within the context of the job. Coming from the community college, it was extremely difficult to let go of the broad context of any of the math areas. For example, I wanted to teach everything about decimals, when the company primarily uses four place decimals and only adds and subtracts decimals. Did my students need to read 1, 2, or 3 place decimals or know the names for place value? I'm not sure.

Revision:

Some of those hours of observation and interviewing should have been spent after the test group had gone through the classes. It was important to go back to the floor after I had been with the students and had a better handle of their skill level and needs. Time was a definite factor here since masses of materials had been developed or chosen already!

Jeff Fineman:

My SME, Jeff Fineman, was invaluable in offering advice and gathering materials for class. He was probably my most important contact since he spent much of his time in manufacturing and assembly. Many times I wasn't sure quite how to apply something we were discussing to the job and he came to my rescue. He was also my best critic when reviewing the materials I developed. Most of the deletions, additions, and rewording were at his suggestion.

Team Advantage:

I worked essentially alone on this project. Through the same grant I am working on two other projects with two other instructors. While it was valuable to be able to plan and carry out the entire project on my own, I really missed group decisions and development. My materials probably suffer because of limited assessment on the part of instructors. Design and development time were also at a premium which others could have helped lessen. To carry out the entire project as Dick and Carey suggest seems nearly impossible, even with a team.

Conclusion:

All in all, I don't think I could have asked for a better company than Leupold & Stevens. It was an excellent introduction to the business world. Everyone was thoroughly cooperative and very friendly. They even went so far as to offer me office space and a file drawer. Ideally I would like to continue developing and improving the basic math classes that I offered. The more time spent observing and learning about the company, the more job specific the course could become. One observation that I heard repeatedly was that I made the content easy to understand unlike past trainers who had taught over the heads of so many of the workers.

Skill Builders MT 5/24/91

(Handwritten copy faxed to NWRL)

NWRL FAX 275-9489

Name:

Marjorie Taylor

Phone: 666-4480

Partnership:

Leupold & Stevens, Inc. & Portland Community College

Techniques Used To Target/Assess istructional Needs:

- Company/employee observation
- Focus groups with manufacturing & assembly supervisors
- Interviews with manufacturing & assembly workers

Instructional Goals:

Within context of company use, provide instruction in 8 basic math skill areas: -Calculator math

-Blueprint Math/symbols

-Decimals

-Fractions

-Comparing Fractions, Decimals, & Percent:

-Measurement, Averages, Ranges

-Metric Conversions

-Right Triangle Formula Status & Timeline For Curriculum Development:

Curriculum development is on-going, approximately 8 hours weekly. (This includes revision.)

48 hours in January

44 hours in February

32 hours in March

Brief Description of Curriculum Being Developed/Used:

See goals. The curriculum is semi-self-instructional with each student working in only the areas of chosen interest and in those areas, the particular skills found lacking on the pre-tests. Most of the students are taking at least 7 modules. Some students signed up for only 1 or 2 modules. They are self-paced.

(Anticipated) Starting Date of Instruction:

February 12, 1991 to April 18, 1991

Place and Times of Instruction:

Leupold & Stevens, Inc., Beaverton, OR

Tuesday & Thursday afternoons, 3:00 - 5:30 PM

(Anticipated) Number of Students to be Served:

15 - 20 actual number

Plan for Assessing Student Progress:

- Pre-test & post test for each module
- 2. Supervisor questionnaire
- 3. Student comments/ evaluation

Plan for Measuring Program Impact on Workplace:

(See # 2 & 3 above)

Special Problems or Issues:

Limited number of enrolled students. Company doesn't offer any incentives to take classes. Classes are all on employee time.

Comments:

This company has been a pleasure to work with. I'm frustated that the people who really need the math probably didn't sign up. The classes are a review for most of the students & they seem to really enjoy them. Two students may really profit from the classes as their skills were really low.

Jim Giles
Anthia Swanson
Leupold & Stevens, Inc.
P.O. Box 688
Beaverton, Oregon 97075-0688

Dear Jim and Anthia:

Thank you for permitting me to visit Leupold & Stevens this past month. I really expreciate you and the many people who gave time to show and explain their jobs to me.

There are three main areas I would like to address in this letter. First, I would like to thank specific people. Second, I would like to propose an instructional goal. Third, I will detail my current activities and ask for Anthia's help on a couple of items.

I especially thank Fran Wichman for giving me the grand tour of Leupold & Stevens. My meetings with the assembly and manufacturing supervisors were instrumental to my analysis. Sheri Canon, Peggy Leathers, and Ric Rosenbaum were great letting me follow and watch them. Pat Renner, George Watson, Harry Wilson and many others throughout the company provided valuable input and I thank them.

The area I see the most potential in is structuring the instructional goal around the Leupold & Stevens blueprint. Therefore, I propose the instructional goal be as follows:

Using a calculator, employees will demonstrate basic math applications found on a Leupold & Stevens blueprint.

Upon completing instruction the student will be able to do the following:

- * Complete basic operations on a calculator
- Read and demonstrate basic decimal operations
- * Convert decimals to fractions
- * Measure accurately with calipers, record the measurements, and obtain averages and ranges
- * Perform metric conversions
- * Solve basic trigonometric functions

Since adults have such varied needs, the class will be set up as ?. lab with open entry and exit. Students will choose the particular areas they want to grow in. The first class will determine each student's goals and an individual program will be set up to help each student accomplish the goals in the time it takes him to accomplish them.

We discussed conducting instruction through February and March. I would like to leave the ending date open and offer the class as long as there are students working toward their individual goals which may or may not be the end of March. Does this sound okay? Do you feel these objectives will benefit assembly and manufacturing? I want to be sure I meet Leupold & Stevens' needs.

Presently I am formulating specific objectives and the tasks involved in accomplishing them, developing means of evaluating the objectives, and beginning to design the instruction. Anthia, I am going to need a variety of blueprints as well as someone either to assist me in class with the instrument readings or teach me how to accurately read them.

Jeff Fineman expressed an interest in helping me with any instruction. I will call him next week.

Two items are attached. One is an idea for a flyer advertising the class. The other is a formal statement of the problem, purpose of instruction, and the target group. I will be popping in and out and will keep you posted on my progress. Thank you!

Sincerely,

Margie Taylor

Job Title TECHNICIAN Length of time at Leupold & Stevens //yrs
Single Head of Household: yes no
1. How do you use math in your present job? CALIBRATING INSTRUMENTS, MODIFYING PARTS TO F
2. What are your most important math needs? BLUEPRINT MATH
3. How will improving your math skills improve your job performance? INCREASE SPEED IN CALCULATING
4. Will improving your math skills help your chances of moving to another job position? What position do you hope to obtain? I HOPE 50
5. What is most important for you to accomplish by taking these math classes? LEARN RIGHT TRIANGLE CALCULATIONS

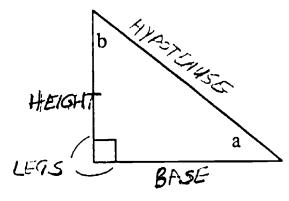

RIGHT TRIANGLE POST TEST

100%

Name __

- 1. Define right triangle. HAS ONE 95° ANGLE
- 2. Label each side of the right triangle with the correct word: base, height, hypotenuse, legs.

3. In the above triangle, if angle a is 40°, 20', how many degrees is angle b?

4. Solve each of the following without using your calculator.

a)
$$\sqrt{36} = 6$$
 b) $7^2 = 49$

b)
$$7^2 = 49$$

5. Use your calculator to solve the following.

a)
$$\sqrt{1225} = 35$$
 b) $\sqrt{289} = 17$

b)
$$\sqrt{289} = 17$$

c)
$$14^2 = 196$$
 d) $135^2 = 18225$

d)
$$135^2 = 18225$$

6. Where D = diagonal & S = sides. Solve for D. (D= S x 1.4142)

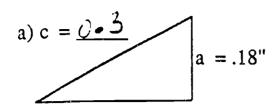

a) A 5" square,
$$D = \frac{7.07}{}$$

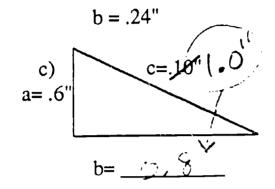

a) A 5" square, D =
$$\frac{7.07}{}$$
 b) A 2.5" square, D = $\frac{2.535}{}$

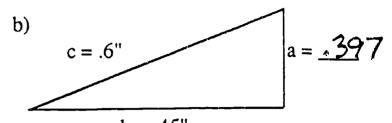

Skill Builders MT 4/2/91

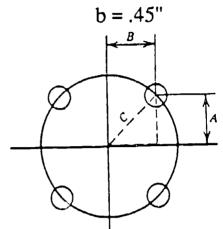

7. Use the attached formula sheet to solve for the following triangles.

- 8. Determine the diameter of the bolt circle if A = .120", B = .160". d = ______
- 9. Use the attached formula sheet to solve for each set of values.

a) Find A.
$$C = 5$$
, $D = 36.87^{\circ}$

$$A = 3.0$$

b) Find A.
$$B = 4$$
, $D = 36.87^{\circ}$

$$A = \frac{3.0}{}$$

c) Find B.
$$C = 5''$$
, $D = 11.5^{\circ}$

d) Find B.
$$A = 1$$
", $D = 11.5$ °

$$B = 4.91$$

e) Find C.
$$A = 11.4$$
", $D = 70^{\circ}40$ '

f) Find C.
$$B = 4$$
, $D = 70^{\circ}40'$

10. a) Find D.
$$A = .8$$
", $B = .15$ "

$$D = 79.38^{\circ}$$

b) Find D.
$$B = .15$$
", $c = .17$ "

Classes in basic math applications

When: Tuesdays & Thursdays

Time: 3:30 - 5:30 (Come at 4:00 if it fits your schedule better.)

Date	Ciass and Goals
2/12 * 2/14	Calculator Math - Using a calculator the student will add, subtract, multiply, and divide accurately.
2/19 2/21	2. Blueprint Math/Symbols - The student will locate and label the main parts of the titleblock and identify and locate symbols for tolerances, radius, diameter, degree, and decimal.
2/26 2/28	3. Decimals - The student will read and compare decimal values, calculate decimal tolerances, and compare decimal values of five parts.
3/5 3/7	4. Fractions - The student will add and subtract fractions and convert them to decimals.
3/12 3/14	5. Comparing Fractions, Decimals, and Percents - The student will change fractions to decimals, decimals to percents, and be able to compute equal values of each.
3/19 3/21	6. Measurement/ Averages/ Ranges - The student will measure and compare five parts with a given mean and compute simple averages and ranges.
3/26 3/28	7. Metric Conversions - Using formula charts the student will convert standard measurements to metric measures.
*2/12 & 2/14 4/2 & 4/4	8. Right Triangle Formulas / Calculations - Using right triangle formula charts and a scientific calculator the student will calculate unknown angles or sides.

NOTE: These are basic math classes that can be started at any date.

NOTICE

Math Classes Schedule Change

The dates of some of the classes have been changed. If you had planned to attend any, please note the date changes.

Class times are still Tuesdays and Thursdays, 3:00 - 5:30, Conference Room #4.

Date	Class & Goals					
3/19 3/21 3/26 3/28	5. Comparing Fractions, Decimals, and Percents The student will change fractions to decimals, decimals to percents, and be able to compute equal values of each.					
4/2 4/4	6. Right Triangle Formulas / Calculations Using right triangle formula charts and a scientific calculator, the student will calculate unknown angles or sides.					
4/9 4/11	7. Measurement/ Averages/ Ranges The student will measure and compare five parts with a given mean and compute simple averages and ranges.					
4/16 4/18	8. Metric Conversions Using formula charts the student will convert standard measurements to metric measures.					

AGENDA Supervisor Brainstorming Is There a Need for a Repeat Math Class?

1. How many employees in your department need math upskilling?

2. Ideas on possible ways of rewarding students.

3. Ideas on class length and times.

92

MATH SKILLS SCHEDULE

May 14, 1991	Pretest Read and Compare Decimal Values
May 16, 1991	Calculate Decimal Tolerances Compare Decimal Values of Five Parts
May 21, 1991	Decimal Post Test Introduction to Fractions/Mixed Numbers
May 23, 1991	Add/Subtract Fractions Convert Fractions to Decimals
May 28, 1991	Fraction Post Test Meaning of Percent
May 30, 1991	Compare Fractions, Decimals, & Percents
June 4, 1991	Solve Percent Problems with the Calculator
June 6, 1991	Post Test

LEARN RIGHT TRIANGLE CALCULATIONS

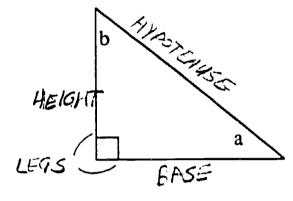

RIGHT TRIANGLE POST TEST

100%

Name __

- 1. Define right triangle. HAS ONE 95° ANGLE
- 2. Label each side of the right triangle with the correct word: base, height, hypotenuse, legs.

3. In the above triangle, if angle a is 40°, 20', how many degrees is angle b?

4. Solve each of the following without using your calculator.

a)
$$\sqrt{36} = 6$$
 b) $7^2 = 49$

b)
$$7^2 = 49$$

5. Use your calculator to solve the following.

a)
$$\sqrt{1225} = 35$$
 b) $\sqrt{289} = 17$

b)
$$\sqrt{289} = 17$$

c)
$$14^2 = 196$$
 d) $135^2 = 18225$

d)
$$135^2 = 18225$$

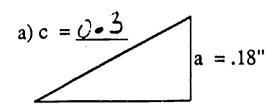

6. Where D = diagonal & S = sides. Solve for D. (D= S x 1.4142)

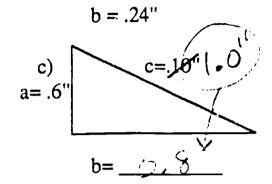

a) A 5" square,
$$D = \frac{7.07}{}$$

a) A 5" square, D =
$$\frac{7.07}{}$$
 b) A 2.5" square, D = $\frac{5.5355}{}$

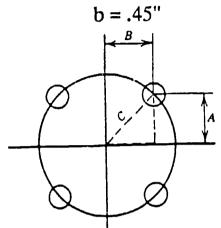

Skill Builders MT 4/2/91

7. Use the attached formula sheet to solve for the following triangles.

b)
$$c = .6$$
" $a = .5$?

8. Determine the diameter of the bolt circle if A = .120", B = .160". d = ______

9. Use the attached formula sheet to solve for each set of values.

a) Find A.
$$C = 5$$
, $D = 36.87^{\circ}$

$$A = 3.0$$

b) Find A.
$$B = 4$$
, $D = 36.87^{\circ}$

$$A = \underline{3.0}$$

c) Find B.
$$C = 5$$
", $D = 11.5$ °

d) Find B.
$$A = 1$$
", $D = 11.5$ °

e) Find C.
$$A = 11.4$$
", $D = 70^{\circ}40$ '

f) Find C.
$$B = 4$$
, $D = 70^{\circ}40'$

10. a) Find D.
$$A = .8$$
", $B = .15$ "

$$D = \frac{79.38^{\circ}}{}$$

b) Find D.
$$B = .15$$
", $c = .17$ "

Blueprint Math

Objective: Using Blueprint #44255, the student will locate and label the main parts of the title block and identify and locate symbols for tolerances decimals, diameter, radius, & degree.

- 1. Purpose & steps in using blueprints.
- 2. Identify and label the main parts of a title block.
 - Location and purpose of title block.
 - List main parts of a title block. The main parts include the following:

 part name, part number, material, tolerances, draftsman, checker,

 company name, & scale.
 - Label the main parts on a title block.
 - Using scale.
- 3. Locate symbols and specifications for tolerances.
 - Tell when to use two place and three place decimal tolerances.
 - Locations tolerances are found on blueprints.
- 4. Locate and identify symbols showing decimals, diameter, radius, & degree.

Skill Builders MT 2/91

Blueprint Math Pre-test

N	ame	•	Date
1.	The titleblock is usually locat	ed	on blueprints.
2.	The purpose of the titleblock	is to	·
3.	Using blueprint # 44255, mat	ch the correct answers w	ith each item given in the titleblock.
	a) Company name:		
	b) Part name:	<u> </u>	
	c) Part number:		
	d) Material to use:		
	e) Draftsman:		
	f) Checker:		
	g) Tolerances:		
	h) Scale:		
4.	Using blueprint # 44255, show below.	w what tolerance will be	added and subtracted to each number
	a) .750	b) .175	c) 3.25
	d) .50	e) 3.087	

Skillbuilders MT 2/91

5.	In addition to the titleblock where else are tolerances located?
	Show an example of this
6.	Give a measurement and a bilateral tolerance from blueprint #44255
7.	Give degrees and a bilateral tolerance from blueprint #44255
8.	Give a diameter measurement from the blueprint
	What symbol indicates diameter?
9.	Give a radius measurement from the blueprint.
	What symbol indicates radius?

BLUEPRINT WORKSHEET

Name	

Choose one of the blueprints provided to answer the questions below. Check your answers with another student or an instructor.

1.	Blueprint #
2.	Where is the title block found on this blueprint?
3.	Give a measurement with its bilateral tolerance.
4.	Give an unilateral tolerance from this blueprint if there is one on it
5.	What material is to be used? (If a name is not given, give the number.)
6.	What scale is the part drawn to?
	Is it smaller or larger than the drawing?
	Why do you think this scale was chosen?
7.	If the scale is 2/1 on a blueprint and the measurement given is 3.570. How large will the drawing measure with a ruler?
8.	How will the scale of the blueprint affect the degrees shown on the drawing? If you were to measure the degrees with a compass would it be the same, larger, or smaller?
9.	Is this blueprint in inches or millimeters?
10). What date did the latest change occur on this blueprint?

Blueprint Math Post Test

Name		_ Date	
Use Blueprint # 44255 to	answer the items below	w.	
1. Where is the Titleblock	usually found on blue	prints ?	
2. List the main parts of a	titleblock and the iter	n indicated on bluepr	int #44255.
Main part	<u>L &</u>	z S title	
3. According to the blueps numbers.	rint, what tolerances w	ill be added or subtrac	cted to the given
a) .650	b) .175	c) .250	
d) 90 degrees	e) .750	f) .35	
Skill Builders MT 2/91			

4. What kind of line is A?
5. What kind of line is ?
6. What kind of lines are ?
7. When was the ring released for preproduction?
8. What is the diameter of the center hole?
9. If the scale is 1/1 on a blueprint and the measurement given is 3.570, how large is the dimension if you measured it with a ruler?
10. When was this blueprint designed? What was the last date changes were made?

CALCULATOR MATH

GOAL: Using a calculator, the student will add, subtract, multiply, and divide accurately.

- 1. Label the main functions on a calculator
 - Locate on/off key
 - Turn calculator on/off
 - Locate function symbols and identify
 - Locate the clear and clear entry keys
 - Locate "readout", number keys, & decimal point
- 2. Perform whole number addition operations on a calculator
 - Define place value for whole numbers
 - Write place values up to the billions place
 - Use vocabulary words
 - Estimate reasonable answers to addition problems
 - Add using a calculator
 - Discuss ways to check answers
- 3. Perform whole number subtraction operations on a calculator
 - Define subtraction vocabulary
 - Subtract using a calculator
 - Discuss ways to check answers
- 4. Perform whole number multiplication operations on a calculator
 - Define multiplication vocabulary
 - Multiply using a calculator
 - Discuss ways to check answers
- 5. Perform whole number division operations on a calculator
 - Define vocabulary words used in division
 - Distinguish division symbols
 - Divide using a calculator
 - Discuss ways to check answers

Skill Builders MT 2/91

CRITICAL THINKING

GOAL: Using a calculator, the student will correctly solve a variety of word problems using addition, subtraction, multiplication, or division of whole numbers.

- 1. Read a word problem and determine what the problem is asking.
 - Verbalize what the problem is
 - Write correctly what needs to be found including the units
- 2. Indicate which operation or operations will be used.
 - Determine whether the problem involves addition, subtraction, multiplication, or division or a combination of these
 - Write the order of operations
- 3. Solve the problem
 - Calculate the answer
 - Determine if the solution answers the problem
 - Determine if the answer is a reasonable answer
 - Reread the problem, check figures and calculations

Skill Builders MT: 1/92

Decimals

Objective: Using the Leupold & Stevens blueprint and the Variables Control Chart, the student will read and compare decimal values, calculate decimal tolerances, and compare decimal values of five parts.

- 1. Read and compare decimal values
 - Meaning of decimals
 - Using decimals on a blueprint
 - Decimal place values
 - Rounding off decimals
 - Comparing decimals
 - -Writing decimals in value order
- 2. Calculate decimal tolerances
 - Read and add decimals needed on blueprints
 - Add decimals using a calculator
 - Subtract decimals on blueprints
 - Subtract decimals using a calculator
- 3. Compare decimal values of five parts

Skill Builders MT 2/16/91

DECIMAL PRE-TEST

Nan	ne	_	. [Date	
1.	Write the equivalent decimal for	or the following	g fractions.		
	a) 3/10 =	t	o) 35/100=		
	c) 72/100= d)	25/1000=		e) 3/1000=_	
2.	Arrange in descending order (argest first)			
	a) .03, .003, .3, .003				
	b) 1.38, .138, .1385, 1.385		-		
	c) .25, 1.2, .125 .0702				
3.	Arrange in ascending order (sr	nallest first)		·	
	a) .302, .28, 2.3, .32			•	•
	b) .462, .4023, .47, 4.2	-			
	c) .07, 7.35, .876, 7.3	- Control Control			
4.	Give the correct decimal number	ers for the follo	owing words.		
	a) six tenths =	b) three	hundredths :	=	

c) one and thirty-three hundredths = ______ Skill Builders MT: rev. 1/92

d) one and one thousandths =

e) one thousand one hundred eleven and one hundred fifteen thousandths

5. Write the correct place value for the spaces shown below. Two have been done for you.

units	thousandths

Round off the following numbers to the nearest hundredth. 6.

Use these symbols <, >, = to compare the following numbers. 7.

- a) .3 _____.9

Mary clocked in a total of 10 hours at work. If she spent 7.7 hours repairing 8. scopes, how much time was left for other activities? How much time is this in hours and minutes?

Variables Control Chart

Name	Date
figu	are only examining the sample measurements on this chart. They are the same of the page. (We will discuss rages and ranges in another class.)
1.	Find the name of the product.
2.	What are the specification limits? (hint: look in box on top right side.
. 3.	Can you figure out from the graph what the norm is?
4.	Write the measurement samples for 7/18/90, 6:30 AM.
	a) b)
	d)e)
5.	Arrange the measurements above in order from the smallest to the largest. Put a "1" by the smallest, a "2" by the next one and so on.

6.	Calculate the amount that the part misses ideal specification. Example from 7/16/90: .9238 9235 (ideal measurement)			
	.0003 larger than ideal specifications			
	a) b)			
	c) d)			
	e)			
7.	Are any of the measurements outside of the specification limits?			
	, se all allegations devoted of the opposition in the second of the opposition in the opposition i			
0				
8.	On your calculator add the 5 measurements. Is your answer the same as the sum given on the chart? (Remember, these are all decimal			
	values.)			
9.	For practice you may want to add some of the other samples. Some of			
	the sums given are incorrect.			

Rounding Decimals through Thousandths

Name	Date
Round the decimal below to the nearest thousand	andth.
5 5. 7 1 6 8	
1. Underline the place digit to be round	led. 5 5. 7 1 <u>6</u> 8
2 .Look at the digit to the right of the u That digit is 8.	nderlined digit. 55.71 <u>6</u> 8
3. If the digit to the right of the underline greater than 5, increase the underline digit to the right of the underlined digit the underlined digit remains the same than 5, so the underlined digit is increase.	d digit by 1. If the git is less than 5, e. The 8 is greater
4. All digits to the right of the underline The 8 in the ten thousandths position	_

Complete the three columns below. First round each decimal to the nearest tenth, then the nearest hundredth, and then to the nearest thousandth.

	Decimal to be rounded	tenths	hundredths	thousandths
1.	0.05213			
2.	17.52481			
3.	.4288			
4.	1.3673			
5.	99.8810

FRACTION PRE- TEST

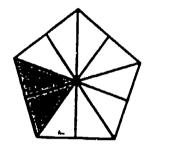

Name____ Date

1. Write a fraction or mixed number for the shaded portions of the pictures.

2. Change the following to either a mixed number or an improper fraction.

3. Compare the pairs of fractions and mixed numbers by using <, >, or =.

Skill Builders MT 3/5/91

4. 125 maintubes were manufactured on one machine during day shift. A total of 250 maintubes were manufactured in three shifts. What fraction of the tubes were manufactured during day shift?

5. Supply the missing number in the following.

$$\frac{3}{4} = \frac{24}{8} = \frac{5}{40} = \frac{1}{9} = \frac{7}{54} = \frac{21}{30}$$

$$\frac{1}{8} = \frac{5}{40}$$

$$\frac{1}{9} = \frac{1}{54}$$

$$\frac{7}{30} = \frac{21}{30}$$

6. Find the lowest common denominator for each pair of fractions.

$$1/5, 4/15 =$$

7. Add:

8. Subtract:

9. Change these to decimals.

10. Rosa assembled thirty-five scopes in a day. The first hour she assembled three scopes. What fraction of the total is this?

FRACTION DECIMAL CONVERSIONS

Name	Date
------	------

Use the attached blueprints to convert the given fractions to decimals. You are the engineer who must change these fractions to decimals and replace them on the blank blueprints where the fractions were shown.

What are some reasons our present blueprints are written in decimals?

Converting fractions to decimals

A. Change 3/4 to a decimal.

$$\div 4 = \text{or}$$

- B. Change 1 1/5 to a decimal.
 - * First change the mixed number to an improper fraction.

$$1 \frac{1}{5} = \frac{6}{5}$$

$$6 \div 5 =$$
 or

$$\frac{1.2}{5|6.0}$$

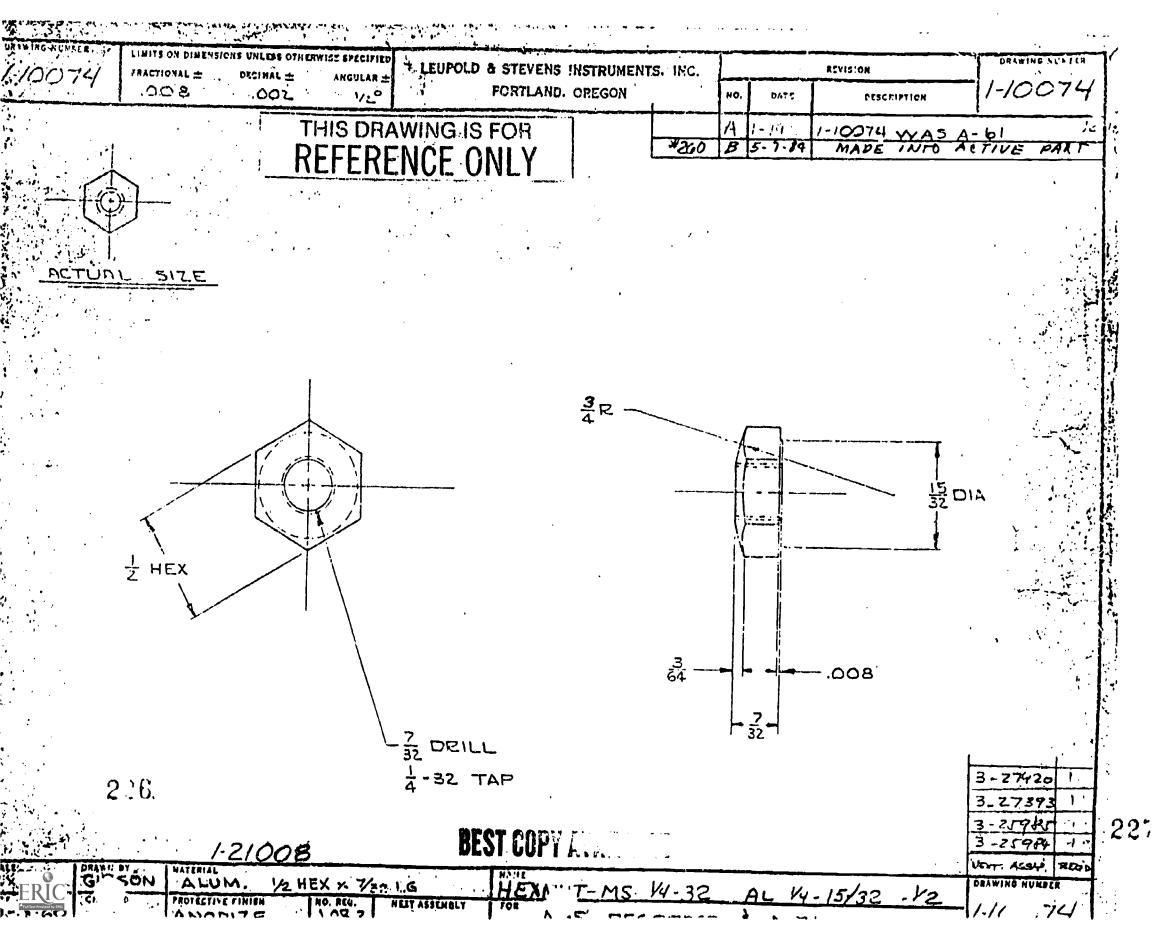

C. Change 1/3 to a decimal.

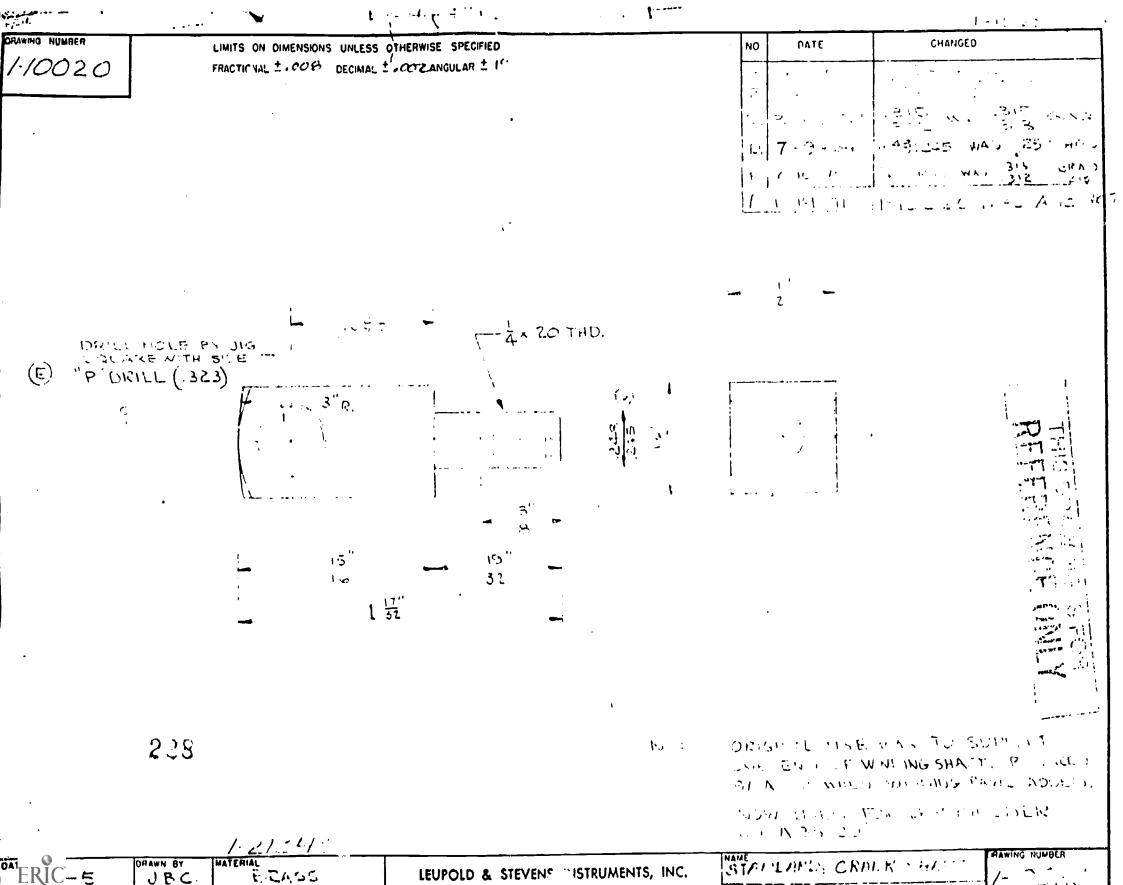

$$3 \div 1 =$$
 or $33\frac{1}{3} = .33$

The first two examples are terminating decimals because there were no remainders. The third example is a repeating decimal because the remainder of 1 keeps repeating. In such a case, stop dividing after two decimal places and write the remainder at a fraction or round it off to the nearest hundredth.

10. Change the fractions and mixed numbers to decimals.

a)
$$7/8 =$$

e)
$$51/9 =$$

11. Change the fractions to decimals and solve.

a)
$$5/12 \times 1/5 =$$

b)
$$14/15 + 3/7 =$$

c)
$$93/4 \div 11/3 =$$

d)
$$53/7 - 25/8 =$$

12. Find the lowest common denominator for each pair of fractions.

$$\frac{3}{4}$$
, $\frac{5}{6}$ $\frac{1}{5}$, $\frac{4}{15}$ $\frac{1}{2}$, $\frac{3}{8}$ $\frac{3}{4}$, $\frac{3}{5}$ $\frac{1}{5}$

$$\frac{1}{2}$$
, $\frac{3}{8}$ ____

$$\frac{3}{4}$$
, $\frac{3}{5}$ _____

Comparing Fractions, Decimals, Percents

Objective: The student will change fractions to decimals, decimals to percents and be able to compute equal values of each.

1. Meaning of Percent

- What percents mean
- Showing percents

2. Comparing Fractions, Decimals, & Percents

- Vriting equal fractions, decimals, percents
- Changing percents to decimals
- Changing decimals to percents
- Changing fractions to percents

3. Solving Percent Problems

- Solving for the whole
- Solving for the part
- Solving for the percent
- Deciding how to solve percent problems

Skill Builders MT Rev. 5/28/91

Router and Scrap Ticket Exercises

Name Date
Use Router # H1697 for these problems.
The router for order #H1697 (F.O. NO.) shows that 400 parts are to be completed out of a total order quantity of 1200.
1. What is the part number (P/N)?
2. What is the description?
3. How many operations with time against them are there?
4. If the last operation was 070 how many operations were completed?
5. What is the ratio of operations completed to total operations?
6. What is the percent of operations completed?
7. How many hours and minutes were spent on the eyepiece at 070?
8. How long (hours and minutes) should it take to complete 400 eyepieces?
9. If there were 20 rejects, what is the ratio of units rejected (using the 400 quantity)?
10. What is the percent of units rejected?
11. What would the rejects cost if the actual cost is \$4.52 and all the operations were
completed? Total cost:
12. The operations have only been completed to 070 so the total cost of the eyepieces cannot be charged to them. Use the percent of operations completed (#6) and multiply by the total cost of the rejects to find the actual value of these rejects that are only partially completed. \$ Value
13. Complete line one on the scrap ticket using the router for order #H1697 and the figures you found above.
Skill Builders MT 2/92

ERIC

Use Router #H1987 for these problems.

The router for order #H1987 (F.O. NO.) shows that 497 parts are to be completed out of a total order quantity of 500. 1. What is the part number (P/N)? _____ 2. What is the description? _____ 3. How many operations with time against them are there? 4. If the last operation was 020 how many operations were completed? _____ 5. What is the ratio of operations completed to total operations? 6. What is the percent of operations completed? 7. How many hours and minutes were spent on the part at operation 020? ______ 8. How long (hours and minutes) should it take to complete 497 parts? 9. If there were 5 rejects, what is the ratio of units rejected (using the 497 quantity)? 10. What is the percent of units rejected? 11. What would the rejects cost if the actual cost is \$7.32 and all the operations were Total cost: ____ completed? 12. The operations have only been completed to 020 so the total cost of the parts cannot be charged to them. Use the percent of operations completed (#6) and multiply by the total cost of the rejects to find the actual value of these rejects that are only partially completed. \$ Value _____ 13. Complete the second lines on the attached scrap ticket using the router for order #H1987 and the figures you found above. 14. Did you need to complete a scrap ticket for these rejects? Why or why not?

Use the router for Order #.J2942 for these questions.

1.	How many operations are there with time against them?
2.	What it the total order quantity?
3.	How many hours should it take to complete this order?
4.	How much setup time is there?
5.	If the piece is completed to operation 030, what is the process time so far?
6.	There are 4 rejects, what percent of the total screws have passed inspection this far?
7.	These rejects cost \$2.23 each. If 5 operations have time and 3 are completed, what is the
	value of the rejects?
8.	If you need to, complete the third line of the scrap ticket for Part No. 43964.

Use the Route Sheet for order Number H1700 to answer this problem.

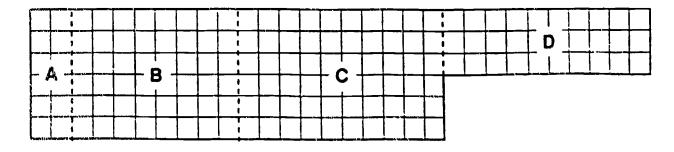

1. We have a major problem! There were 57 rejects after operation 4! If each one costs \$1.15, does a scrap ticket need to be made up? What is the loss? Complete the scrap ticket line #4 if your loss is over \$15.00.

COMPARING FRACTIONS, DECIMALS, AND PERCENTS POST TEST

Name	Date
------	------

1. For each region below, find and record what percent the area of each subregion is of the area of the entire region.

- 2. Shade in 25% of the entire region in the above rectangle.
- 3. Complete the following table.

	Percent	Fraction	Decimal

RIGHT TRIANGLE MATH

Objective: Using the right triangle formula charts and a scientific calculator, the student will calculate unknown sides and angles.

- 1. Right Triangles
 - Definition of right triangle
 - Degrees in right triangles
- 2. Pythagorean Theorem
 - Square and square root symbols
 - Finding square and square root on a calculator
 - -Finding diameter of a bolt circle
 - Formula for Pythagorean theorem
- 3. Converting degrees and minutes to decimal degrees
 - Converting applications
 - Converting using the calculator
- 4. Using the formula chart to solve for right triangles
 - Solving the right triangle for sides only
 - finding degrees in a right triangle

RIGHT TRIANGLE PRE-TEST

Name	Date
 How many degrees are Solve the following. 	in the three angles of a right triangle?
2. 40° 50' 20° 30'	3. $\sqrt{49} =$
4. 25 ² =	5. Convert 25°35' to decimal
	degrees.

6. If the sides of a right triangle measure .300 and .400. What is the length of the hypotenuse?

Skill Builders MT 4/19/91

Converting Degrees and Minutes to Decimal Degrees

When using the calculator, it is often easier to work with degrees if the minutes are changed to decimals. This is easily done by dividing the number of minutes by 60. Since there are 60 minutes in one degree, 60 is the denominator and the number of minutes is the numerator.

Example: Change
$$35^{\circ}30'$$
 to decimal degrees. $30/60 = .5$
 $35^{\circ}30' = 35.5^{\circ}$

Conversely, to change decimal degrees to degrees and minutes, multiply by 60.

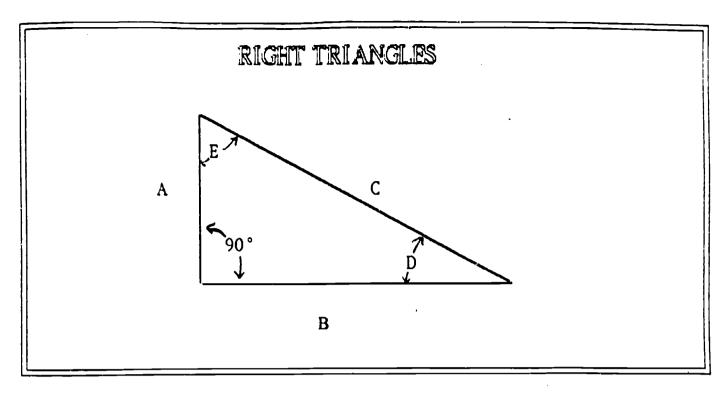

Example: Convert 45.20° to decimals and minutes. .20 X
$$60 = 12$$
 $45.20° = 45° 12'$

Convert the following degrees and minutes to decimal degrees.

Change the decimal degrees to degrees and minutes.

- 4. .9237
- 5. <u>.9241</u>

TOTAL ____

AVERAGE ____

RANGE _____

Skill Builders MT 4/9/91

FINDING THE AVERAGE

The <u>average</u> of a set of numbers is found by adding the numbers, and then dividing this sum by the number of numbers in the set. The average of 37 and 49 is found as follows:

$$37 + 49 = 86$$
 and $86 \div 2 = 43$. So the average is 43.

Example: Find the average of 45, 53, & 34.

Solution: 45 + 53 + 34 = 132. There are 3 numbers so $132 \div 3 = 44$. The average is 44.

Solve the following problems:

- 1. Find the average of the numbers 103, 113, 97,99.
- 2. A basketball team had scores of 74, 83, 91, 85, 91, 76, 70, 83, 102, & 95 in ten games. What was their average score per game?
- 3. Jim's income for each of six months was \$1,048, \$991, \$1,150, \$975, \$1,145, and \$1,225. Find the average monthly income.
- 4. The average of 3 scores was 81. If two of the scores were 75 and 80, what was the third score?

Skill Builders MT 4/9/91

5. For 3 months, Eileen's deposits and withdrawals were as follows:

	<u>Deposit</u>	Withdrawals
January	\$ 425	\$ 375
February	430	383
March	396	370

What was the average monthly difference between deposits and withdrawals?

Note: When finding the average of 5 numbers, multiplying the total by .2 will give the solution. Example: $4.6194 \div 5 = .9239$ or $4.6194 \times .2 = .9239$. From our study of fraction / decimal equals we know that 1/5 = .20. The above example is the same as $4.6194 \times 1/5$.

FINDING RANGE

Sometimes the range of a set of numbers needs to be found. To find range <u>subtract</u> the lowest number in the set from the highest number. The range of 37 and 49 is found as follows:

49 - 37 = 12. The range of the two numbers is 12.

Example: Find the range of 45, 53, & 34.

Solution: The largest number is 53 and the smallest is 34 so

53 - 34 = 19

The three numbers have a range of 19.

Use the problems on the average sheet to compute the ranges for each of the groups of numbers.

MEASUREMENT POST TEST

Name	Date
Use the blueprint to complete the following.

- Supervisor Evaluations

LEUPGLD & STEVENS, INC.

FINAL REPORT

I returned to Leupold & Stevens, Inc. for an additional math skills class in January 1992. I would like to evaluate this last instruction period based on some of the recommendations and concerns that were voiced in the previous report. First the basic content of the class will be reviewed; then the students who participated will be mentioned; and finally some concluding observations about the experience.

Content of 1992 classes:

In the previous report I felt that my content was too broad, first affecting the length of classes and then affecting the speed at which the classes needed to be conducted. This time four units were introduced: Calculator Use, Critical Thinking, Decimals & Percents. I felt the calculator use and story problem classes were important lead-ins for decimals and percents. Percents was the area most of the students needed experience in, and while more time should have been spent on percents, the three previous units were considered important preliminaries to percents. I skipped fractions this time and it didn't seem to affect the outcome, although it may have affected the final grades on the percent section. They were not as high as I would have liked.

Participants:

Most of the students who participated were from the same area of manufacturing, however they had at least two different supervisors which caused a problem with a worksheet I tried to develop on percents. The supervisors used two different ways to find scrap loss and I tried to teach both much to the dismay of some of the students. On hindsight I did a poor job of introducing the topic and explaining that both ways produce the same answer.

Some of the students only stayed for half the class time and found it difficult to keep up with the assignments as well as missing explanations on areas of concern. The company did pay for half of the class time and I think it improved the participation, but as before there was any number of "genuine" excuses for missing class. All in all attendance was improved over last year.

1

Several of the students were repeats from my previous classes. It was encouraging to see how much they remembered from last year and where they advanced to this year. Some of these were the most frustrated students last year who felt that I went too fast. With the repetition they not only understood it the second or third time around, but they were able to move to new areas. This was the most encouraging aspect of the program: these little bits of success that give the students confidence to keep at it and succeed.

Concluding Observations and Recommendations:

Again Leupold & Stevens was the most cooperative and enjoyable of companies. Anthia Swanson is to be commended on again giving me free hand to run around the company. She also arranged the boardroom for classes, and sign-up sheets for classes. Carol Van Cleave, a lead person for most of my students, was invaluable in giving me feedback and checking my worksheets for accuracy. She was also available to help the students with all of their homework questions. As an incentive for the workers to keep up their math skills I left several basic math books with her to make available to her people. She also has one or two people who are hesitant to come to classes and the books and Carol's attention may give them confidence to tackle math and eventually attend classes.

This group of students is ready for another class on just percents and I almost wish I had concentrated on just percents. Yet I could see the improvement in the students from last year and the review may have been the key they needed to open up to percents this time around.

Skill Builders: Marjorie Taylor March 20, 1992.

Router and Scrap Ticket Exercises

Name	Date
Use Router # H1697 for these	problems.
The router for order #H1697 (F total order quantity of 12	O. NO.) shows that 400 parts are to be completed out of a 00.
1. What is the part number (P/I	N)?
2. What is the description?	
3. How many operations with t	ime against them are there?
4. If the last operation was 070	how many operations were completed?
5. What is the ratio of operation	s completed to total operations?
6. What is the percent of opera	tions completed?
7. How many hours and minute	es were spent on the eyepiece at 070?
8. How long (hours and minute	es) should it take to complete 400 eyepieces?
9. If there were 20 rejects, wha	t is the ratio of units rejected (using the 400 quantity)?
10. What is the percent of units	rejected?
11. What would the rejects cost	if the actual cost is \$4.52 and all the operations were
completed?	Total cost:
cannot be charged to the multiply by the total cost	een completed to 070 so the total cost of the eyepieces m. Use the percent of operations completed (#6) and t of the rejects to find the actual value of these rejects that are \$ Value
13. Complete line one on the so you found above.	erap ticket using the router for order #H1697 and the figures

ERIC Full text Provided by ERIC

Use Router #H1987 for these problems.

The router for order #H1987 (F.O. NO.) shows that 497 parts are to be completed out of a total order quantity of 500. 1. What is the part number (P/N)? _____ 2. What is the description? _____ 3. How many operations with time against them are there? 4. If the last operation was 020 how many operations were completed? 5. What is the ratio of operations completed to total operations? 6. What is the percent of operations completed? 7. How many hours and minutes were spent on the part at operation 020? 8. How long (hours and minutes) should it take to complete 497 parts? 9. If there were 5 rejects, what is the ratio of units rejected (using the 497 quantity)? 10. What is the percent of units rejected? 11. What would the rejects cost if the actual cost is \$7.32 and all the operations were completed? Total cost: 12. The operations have only been completed to 020 so the total cost of the parts cannot be charged to them. Use the percent of operations completed (#6) and multiply by the total cost of the rejects to find the actual value of these rejects that are only partially completed. \$ Value _____ 13. Complete the second lines on the attached scrap ticket using the router for order #H1987 and the figures you found above. 14. Did you need to complete a scrap ticket for these rejects? Why or why not?

Use the router for Order #J2942 for these questions.

1.	How many operations are there with time against them?
2.	What it the total order quantity?
3.	How many hours should it take to complete this order?
4.	How much setup time is there?
5.	If the piece is completed to operation 030, what is the process time so far?
6.	There are 4 rejects, what percent of the total screws have passed inspection this far?
7.	These rejects cost \$2. 23 each. If 5 operations have time and 3 are completed, what is the
	value of the rejects?
8.	If you need to, complete the third line of the scrap ticket for Part No. 43964.

Use the Route Sheet for order Number H1700 to answer this problem.

1. We have a major problem! There were 57 rejects after operation 4! If each one costs \$1.15, does a scrap ticket need to be made up? What is the loss? Complete the scrap ticket line #4 if your loss is over \$15.00.
